

Background

Kara captures the opportunity for cool-season production, combined with persistence, in summer-dry farming systems. **Kara** can be used as a component in a pasture, or as the sole grass species with clovers and herbs. The upright, non-aggressive nature makes it ideally compatible with ryegrass, legumes and herbs.

Characteristics

Heading Date	Winter Activity	Growth Habit	Leaf Size	Sowing Rate (kg/ha)
Mid	High	Erect	Large	Mixed sward 1-2 kg/ha

Key Features

- ✓ Rapid establishment
- ✓ Valuable autumn-winter production
- ✓ High quality, summer leafy
- ✓ Drought tolerant
- ✓ Suited to sheep and cattle grazing

Persistence Data

Cultivar	Winter	Spring	Summer	Autumn	Total
Kara	112	104	106	114	109
Vision	117	106	103	109	108
Wana	100	104	103	100	102
Trial Mean	1828	3349	1942	2586	9704
