

“Excellent quality and palatability”

- Long seasonal spread of growth
- Excellent winter growth and summer heat tolerance
- High palatable
- Potential for high legume and herb content

Background

Atom prairie grass is an alternative short to long rotation option for high quality feed requirements. **Atom** has no endophyte, a palatable seed head, potentially high legume and herb content, and summer heat tolerance, which makes it a perfect fit for late-spring, summer and autumn finishing of young stock.

Atom prairie grass also has good winter production, similar to short rotation ryegrasses, making it a useful pasture tool at this time of year. Lax rotational grazing is recommended for **Atom** making it ideal for sowing into run-out lucerne stands. **Atom** will not tolerate water-logged conditions, pugging or soil acidity.

Suggested Mixes

Beef, deer and lax rotational sheep grazing

Cultivar	Rate (kg/ha)
Atom prairie grass	25-30
Sensation red clover	4
Choice chicory	1.5
Tonic plantain	2
Torlesse lucerne	4

Under-sowing run-out lucerne stands

Cultivar	Rate (kg/ha)
Atom prairie grass	25-30
Choice chicory	1.5
Tonic plantain	2
