

“Ideal combination of production and persistence”

- Medium to large-leaved white clover
- High stolon density/leaf size ratio
- Improved out-of-season production
- Shown to be tolerant to clover root weevil

Background

Tribute is a medium-large leaved white clover, with a superior stolon density to leaf size ratio. In Waikato trials **Tribute** has been shown to be tolerant to clover root weevil attack. AgResearch bred **Tribute** from elite germplasm from both New Zealand and Australia.

Tribute is a persistent, highly productive white clover, showing superior out-of season production, **Tribute** should be the first choice white clover cultivar for all high performance pastures.

Production Data

Annual Performance (Huia = 100)

(mean of two trials Woodfield et al. 2003)

CULTIVAR	YEAR 1	YEAR 2	OVERALL
Huia	100	100	100
Demand	149	123	136
Tribute white clover	168	137	150
LSD (0.05)	12	11	12

Annual growth of white clover under sheep grazing (relative to Huia = 100) AgResearch, Manawatu

CULTIVAR	YEAR 1	YEAR 2 %	YEAR 3	OVERALL
Grasslands Tribute	132	127	111	123
Grasslands Huia	100	100	100	100
Grasslands Tahora	108	110	122	109
