|--------------------------------------|------------|
| <b>Ploidy</b>                        | Tetraploid |
| <b>Suggested Sowing Rate (kg/ha)</b> | 25-30      |
| <b>Heading Date</b>                  | Late       |
| <b>Perenniality</b>                  | Annual     |
| <b>Winter Activity</b>               | Very High  |

- Excellent winter production
- Superb silage quality
- Maintains quality in spring with excellent disease resistance
- Outstanding animal performance

### PERFORMANCE

**Jivet** annual ryegrass is a short-term option with very fast establishment and excellent production. **Jivet** is an ideal cultivar to sow between maize crops and has excellent winter activity which carries through spring with extended performance and improved feed quality. **Jivet** is most suited for silage production and its characteristics include a large upright leaf for ease of mowing, disease resistance and high ME for animal performance.
